5. Management System for Vendor(User)
6. Management System for Admin(Backend)

Time Line – 2-3 Month

Phases:-

Phases-1 (Prototyping-Specified Requirement)

-Website Prototype

-UI/UX Design

Provide you a prototype (UI/UX) which will show the external structure of Web App. Your involvement will be crucial. We will be interacting with you regarding the prototype(s). All your prototyping changes will be entertained in this phase.

Update: Show prototype.

Phase-2

-(Development D-1)

Based on confirmed prototype we will develop the web app. We will add internal functionalities and in parallel we will be developing python data scrapping scripts.

Update: We will show you some basic internal functionality with database and try to integrate some sites script too.

-(Development D-2)

We will develop the database structure and integrate scripts of remaining website with it.

Update: Show working of scripts and Product listing.

Phase-3 (Develop MVES)

We develop the Multi-Vendor Market Place & Ecommerce Store and integrate it with Product listing website

Update: Show multi-vendor marketplace.

Phase-4 (Develop Backend Management System)

The backend management system for the admin will developed in this phase which provide you the controlling of your site and user + provide you the statistical data.

Update: Provide you access to admin side management system

Phase-5 (SQA, Testing and Deployment)

In this phase we will do the quality assurance of the web app and do testing of the end product and after that the web application in deployed to you server and its ready for launch.
